

TECHLEAP

Stream – Java

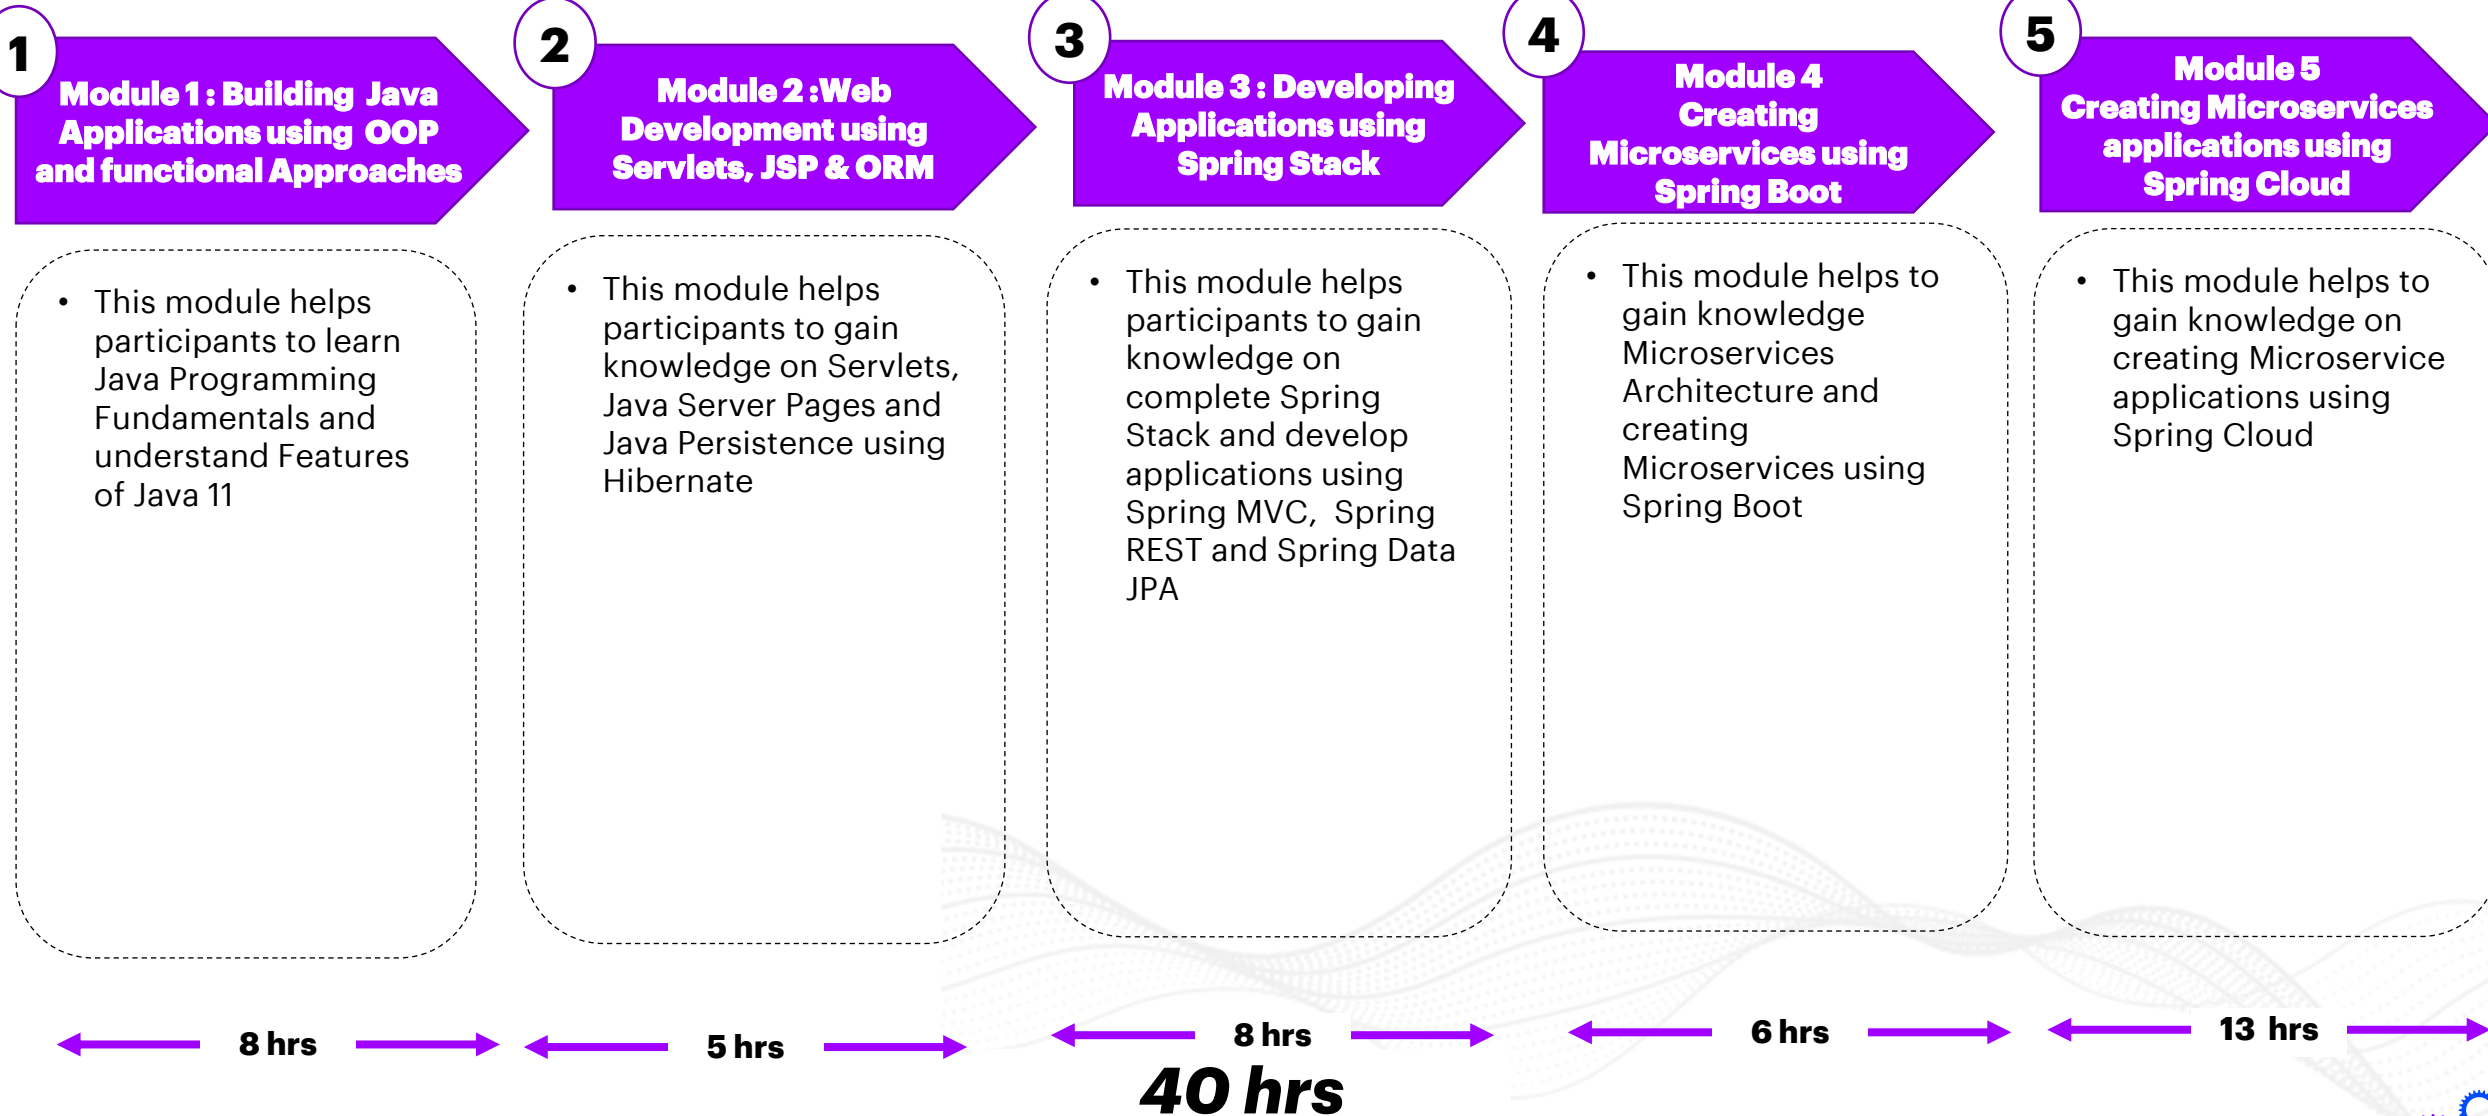

Course Objective

- Building the applications in Java following OOP and functional approaches using Java 8 & 11 features
- Create enterprise applications using spring stack (spring core, spring test, spring ORM, spring REST, spring Security)
- Create Microservice applications using spring boot and spring cloud

Training plan

Module 1:

Building Java Applications using OOP and functional Approaches

This module helps participants to learn Java Programming Fundamentals and understand Features of Java 11 which is the foundation for Full Stack Java Developer

Duration
8 hours

Platform
Pluralsight

[Object Oriented Programming in Java](#)

[What's New in Java 8](#)

[What's New in Java 11: Long-term Support](#)

Quiz – we are in process, it will be enabled soon.
Keep checking Module 1 [here](#)

Module 2:

Web Development using Servlets, JSP & ORM

This module helps participants to gain knowledge on Servlets, Java Server Pages and Java Persistence using Hibernate

Duration
5 hours

Platform
Pluralsight &
Percipio

[Java Persistence with Hibernate Fundamentals](#)

[Servlets & JSP](#)

[What's New in Java 11: Long-term Support](#)

[TechLeap Demos Walk Through & Assignment Document](#)

Quiz – we are in process, it will be enabled soon.
Keep checking Module 2 [here](#)

Module 3 : Developing Applications using Spring Stack

This module helps participants to gain knowledge on complete Spring Stack and develop applications using Spring MVC, Spring REST and Spring Data JPA

Duration
8 hours

Platform
Pluralsight

[Spring Framework: Spring Core](#)

[Spring-MVC with JPA and Hibernate](#)

[Spring MVC Security](#)

[Spring REST Basics - Section1](#)

[Spring REST Basics - Section 2](#)

[Spring Framework: Spring Data JPA](#)

[TechLeap Demos Walk Through & Assignment Document](#)

Quiz – we are in process, it will be enabled soon. Keep checking Module 3 [here](#)

Module 4 : Creating Microservices using SpringBoot

This module helps participants gain the fundamental knowledge necessary to understand Microservices architecture and build Spring Boot Microservice components

Duration
6 hours

Platform
Pluralsight

[Microservices Architecture](#)

[Creating Your First Spring Boot Application](#)

[SpringBoot: Efficient Development, Configuration, and Deployment](#)

[Spring Boot - Profiles](#)

[Testing with Spring Boot](#)

[Software Testing using REST Template](#)

[TechLeap Demos Walk Through & Assignment Document](#)

[Quiz – we are in process, it will be enabled soon. Keep checking Module 4 \[here\]\(#\)](#)

Module 5 : Creation of Microservice applications using Spring Cloud

This module helps participants to build Microservice applications using Spring Cloud Components. Establishing communication among microservice components using- RabbitMQ, Introduction to Reactive Programming - Spring5 WebFlux

Duration
13 hours

Platform
Pluralsight

[Document REST API's](#)

[Spring Cloud Fundamentals](#)

[RabbitMQ by Example](#)

[Effective Oauth2 with Spring Security and Spring Boot](#)

[Spring WebFlux: Getting Started](#)

[TechLeap Demos Walk Through & Assignment Document](#)

Quiz – we are in process, it will be enabled soon. Keep checking Module 5 [here](#)
